| 3. SERVICE ANALYSIS REPORT (SAR-2)—<br>SPECIAL EXCHANGE SERVICES . . . . .                                                                                                                                                                                                                             | 2    | SAR-1 — (Service Analysis Request): Enter 4-digit code identifying originating ISC Team, followed by serial number assigned by the originator to this request.                                                                                                                                                                            |
| 4. SERVICE ANALYSIS REPORT (SAR-3)—<br>PRIVATE LINE SERVICES . . . . .                                                                                                                                                                                                                                 | 3    |                                                                                                                                                                                                                                                                                                                                           |
| 1. GENERAL                                                                                                                                                                                                                                                                                             |      | CCN — (Customer Contracting Name): Enter name and address of the contracting customer.                                                                                                                                                                                                                                                    |
| 1.01 Service Analysis Requests (SAR-1) and<br>Service Analysis Reports (SAR-2 for Special<br>Exchange Services or SAR-3 for Private Line<br>Services) are designed to obtain information on<br>the quality of service being furnished to a customer.                                                   |      | CS — (Type of Service): Enter type or class of service.                                                                                                                                                                                                                                                                                   |
| 1.02 The flow of Service Analysis Requests and<br>Reports is covered in detail in Sections<br>010-520-101 and 010-520-102. Therefore, this<br>section will cover only the format to be used and<br>the information to be supplied as required by the<br>Intercompany Services Coordination (ISC) Plan. |      | LOC — (Locations to Report): For Special Exchange Services, enter the customer name, address, and telephone number of each served point for which reporting will be required. For Private Line Services, enter contracting customer name, network, circuit(s), served points, etc., as appropriate, for which reporting will be required. |
| 2. SERVICE ANALYSIS REQUEST (SAR-1)                                                                                                                                                                                                                                                                    |      | SAR-2 — (Special Exchange Services) or SAR-3 (Private Line Services)—(Service Analysis Report required): Enter duration, dates, or frequency (daily, weekly, etc.).                                                                                                                                                                       |
| 2.01 The SAR-1 format (see Fig. 1 and 2) is<br>designed to be used for teletypewriter<br>transmission. In message preparation and trans-<br>mittal, each item will be identified with its mne-<br>monic codes followed by the appropriate informa-<br>tion.                                            |      | PCO — (Plant Control Office): Enter name and TWX number or Official Message Network Code of person to whom SAR-2 or SAR-3 should be sent.                                                                                                                                                                                                 |
| 2.02 The following should be used as a guide for<br>the preparation of the SAR-1:                                                                                                                                                                                                                      |      | RMK — (Remarks): Enter explanation of necessity for study and any additional requirements for information not provided for elsewhere on this format.                                                                                                                                                                                      |
| TO — Enter TWX number or Official Mes-<br>sage Network Code, name of ad-<br>dressee, and office name or city.                                                                                                                                                                                          |      |                                                                                                                                                                                                                                                                                                                                           |

### 3. SERVICE ANALYSIS REPORT (SAR-2) — SPECIAL EXCHANGE SERVICES

**3.01** Service Analysis Report SAR-2 provides a format for sending trouble report data by 4-row TWX to the originator of a Service Analysis Request (SAR-1). To ensure uniformity, Form E-5068A, "Service Analysis Report SAR-2" (see Fig. 3) should be used as a guide in assembling trouble report data in the proper format preparatory to transmittal. Since the format is designed to permit either manual or machine summarization, it is essential that it be followed exactly.

**3.02** The SAR-2 format is designed to fit an 80-column punched card (see Fig. 4). Certain control codes are used to permit simultaneous reception of teletypewriter hard copy with the punched card. These control codes are:

> (shift key period) punch start.

< (shift key comma) punch stop.

= (shift key dash) end numeric.

These codes must *not* be used anywhere else in the message.

**3.03** Fourteen trouble reports, two lines each, can be entered on each Form E-5068A. Numeric information for each report should be posted to the 42 blocks in the first line, as described in 3.04. To produce a valid card, *exactly* 42 numeric characters must be transmitted. Thirty-seven blocks are available on the second line for text describing nature of trouble, disposition, or other pertinent information. All or any part of the 37 blocks may be used.

**3.04** Preparation of Form E-5068A is as follows:

#### (a) *Heading:*

TO — Enter 4-row TWX number or Official Message Network Code, name of addressee, and city or office name.

ORG — Enter 4-row TWX number or Official Message Network Code, name of originator, and city or office name.

REPORT PERIOD — Enter report period covered by the report.

#### (b) *Columnar Data for Each Trouble Report:*

CONTROL SAR CODE — Enter originating ISC Team 4-digit identification code and 3-digit serial number.

DATE — Enter month and date expressed in four digits. The first two digits show the month, 01 to 12; the last two digits show the date, 01 to 31.

TIME — Enter time received expressed in four digits. The first two digits show the hours of the day on a 24-hour basis, 00 to 24; the last two digits, the minutes 00 to 59.

CALLING NUMBER — Enter calling customer's 10-digit number (NPA or SAC\* code, prefix, and number).

CALLED NUMBER — Enter called customer's 10-digit number (NPA or SAC\* code, prefix, and number).

TYPE REPT — Enter type of report. Use code number shown on Form E-4736 (see Fig. 5).

TBL DISP — Enter trouble disposition code. Use code number shown on Form E-4736.

OUTAGE TIME — Enter outage time expressed in three digits. The first two digits express the hours 00 to 99; the last digit, tenths of an hour 1 to 9.

\*Special Area Code

Text describing nature of trouble, disposition, or other pertinent information should be entered on the line following numeric data for each trouble report. All or any part of the available 37 blocks may be used.

**3.05** The following notes apply to the preparation of punched tape for the transmittal of data entered on Form E-5068A. A hard-copy sample, marked to show teletypewriter functions required for on-line card punching, is shown in Fig. 6. This format is to be followed on all SAR-2 reports.

**Note 1:** The three control codes (>punch start, <punch stop, and = end numeric) control the business machine (card punch). Each individual trouble report transmission must include these three control codes.

**Note 2:** A double space is required between each of the eight columns of data "control SAR code" through "outage time," to improve hard-copy readability. Double spaces will appear on the teletypewriter hard copy but not on the punched card.

**Note 3:** At least ten teletypewriter function operations must occur between trouble reports to give the card punch sufficient time to set up for the next card. Therefore, eight "erase" functions must be transmitted following the "carriage return" and "line feed" at the end of each trouble report.

#### 4. SERVICE ANALYSIS REPORT (SAR-3) — PRIVATE LINE SERVICES

**4.01** The forwarding of trouble data on Switched Services Networks is covered in detail in the 310-200-000 series of Bell System Practices. Requests for analysis data on Switched Services Network should be made to the Network Control Office or the Plant Network Manager.

**4.02** In many cases, part or all of the data required for Private Line Service analysis will be available on computer printouts such as Long Lines Form P-2071, "Customer Detailed Trouble Data" (see Fig. 7). The format of the SAR-3 is designed to facilitate direct transcription to, or comparison with, data on Form P-2071. It may also be used for manual analysis or for mechanized analysis using a punched card.

**4.03** To ensure uniformity, Form E-5068B, "Service Analysis Report SAR-3" (see Fig. 8) should be used as a guide in assembling trouble report data in the proper format preparatory to transmittal.

**4.04** Preparation of Form E-5068B is as follows:

(a) **Heading** — Same as for SAR-2 except the Control SAR Code is included in the heading rather than in the body of the message.

**CIRCUIT** — Enter the prefix number(s), prefix letters, basic serial numbers, and suffix or sub-numbers of the circuit. Spaces not applicable must be filled in with a dash (-).

**DATE** — Enter month and date expressed in four digits. The first two digits show the month, 01 to 12; the last two digits show the date, 01 to 31.

**TROUBLE CODE** — Enter the alphanumeric trouble classification code from Form E-4642 (Telephone) or Form E-4644 (Telegraph) as shown in Fig. 9.

**DURATION TIME** — Enter outage time in hours and minutes.

**LOC PLANT CLEARING TIME** — Enter clearing time in hours and minutes.

(b) **Text** — Enter nature, disposition, and location of trouble and any other pertinent information on the line following numeric data for each report. All or any part of the available 29 blocks may be used.

**4.05** The following notes apply to the preparation of punched tape for the transmittal of data entered on Form E-5068B. A hard-copy sample, marked to show teletypewriter functions for on-line card punching, is shown in Fig. 10. This format is to be followed on all SAR-3 reports.

**Note 1:** The three control codes (>punch start, <punch stop, and = end numeric) control the business machine (card punch). Each individual trouble report transmission must include these three control codes. These codes must **not** be used anywhere else in the message.

*Note 2:* A double space is required between each of the five columns of "Circuit" through "Local Plant Clearing Time" to improve hard-copy readability. Double spaces will appear on the teletypewriter hard copy, but not on a punched card.

*Note 3:* At least ten teletypewriter function operations must occur between trouble reports to give the card punch sufficient time to set up for the next card. Therefore, eight

"erase" functions must be transmitted following the "carriage return" and "line feed" at the end of each trouble report.

*Note 4:* Do *not* use a "line feed" function following the "Local Plant Clearing Time." For comparison with, or transcription to, Form P-2071 or a similar printout, SAR-3 is designed so that all information regarding each trouble report is contained on a single line of teletypewriter hard copy.

## SERVICE ANALYSIS REQUEST (SAR-1)

TO (TWX Number) (Name) (City or Office)  
 ORG (TWX Number) (Name) (City or Office) (Date)

FOR THE  
MANUAL HANDLING OF TROUBLE REPORTS

| CODE                                                                         | TYPES OF REPORTS                                                                                                                                                                                             |
|------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Originating Call<br>1<br>CC - NOT<br>CAN'T CALL<br>NO DIAL TONE              | Does not hear Central Office Dial Tone, Can't Raise the Operator, or receives Slow Dial Tone.                                                                                                                |
| Originating Call<br>2<br>CC - OTH<br>CAN'T CALL<br>OTHER                     | Hears Central Office Dial Tone but Cannot Originate or Complete a Call. Includes reports of Cannot Call on circuits that do not furnish dial tone.                                                           |
| Originating<br>Transmitting Call<br>3<br>TRAN-NOISE<br>TRANSMISSION<br>NOISE | Reports Poor Transmission, Noise, or interference.                                                                                                                                                           |
| Transmitted Call<br>4<br>CBC<br>CAN'T BE<br>CALLED                           | Reports Can't Be Called, e.g. Bell Doesn't Ring, Bell Rings and Can't Answer, Bell Rings No Answer, Bell Rings After Answer, Bell Rings and Can't Trip Ring, Called For Wrong Number, or Gets Busy Incoming. |
| 5<br>MEM SVCS FAIL.<br>MEMORY SERVICES<br>FAILURE                            | Reports trouble with Customer Calling Services features, such as Speed Calling, Call Transfer, Time-very Calling, Call Waiting, Dial Pickup, Dial Hold, or Camp-Off-Hook of an Automatic Switching System.   |
| 6<br>DATA FAIL.<br>DATA FAILURE                                              | Reports Can't Send Data or Can't Receive Data. Includes reports on Automatic Call Unit failures.                                                                                                             |
| 7<br>PHY COND<br>PHYSICAL<br>CONDITION                                       | Reports Wire, Damaged, Loose, or Missing Equipment, etc.                                                                                                                                                     |
| 8<br>MISC<br>MISCELLANEOUS                                                   | Any type trouble report not included in the other codes.                                                                                                                                                     |

PRINTED IN U.S.A.

(a) Front

## DISPOSITION CODES

- 1 STATION SET**  
All troubles in the station set used for any class of service. It includes Teletypewriter station sets, Call Directors, station sets associated with Speakerphones, PICTUREPHONES, PBXs, or Order Terminals and Mobile Telephones. The subset of the two-piece telephone set is considered a part of the station set. Troubles on dial portion of a coin telephone involving coin apparatus are included in Other Station Equipment.
- 2 OTHER STATION EQUIPMENT**  
All troubles in station equipment other than the station set such as Data Sets, BELLBOY Receiver Units, Auxiliary Signaling Equipment, Key Telephone Units, Key Cabinets or Terminals, Supplementary Station Equipment, Switchboards, Switching Equipment, Booths, and Coin Apparatus.
- 3 STATION WIRING**  
All troubles in Drop and Block Wire, Station Protection, Inside Wire, Inside Wiring Cable used in lieu of Inside Wire, and Ground Wires.
- 4 OUTSIDE PLANT**  
All troubles in Cable, Cable Terminals, Amplifiers, Line Wire, Load Coils and their protection, Concentrators, Carrier Equipment, Base and Coast Stations in General Mobile Service and BELLBOY Personal Signaling Service located in places other than central offices.
- 5 CENTRAL OFFICE**  
All troubles in central office equipment. Includes troubles in central office equipment permanently associated with customer lines and troubles in equipment common to customer lines.
- 6 CUSTOMER ACTION**  
All troubles caused by customer action or error affecting Company-owned and customer-owned equipment or attachments. Also includes trouble on customer-owned equipment or attachments.
- 60 RECEIVER OFF HOOK**  
All troubles caused by customers leaving the receiver off the hook.
- 7 TEST OK**  
Trouble reports are closed as Test OK when the trouble-causing condition cannot be determined and the report is not referred to the central office or outside forces for further investigation. Includes central office and concentrator overload conditions.
- 8 FOUND OK-IN**  
All trouble reports Found OK by central office forces, and not dispatched to outside forces. Reports where there is substantial evidence that the report was caused by lockup conditions, equipment off normal, etc. are classified to the central office.
- 9 FOUND OK-OUT**  
All trouble reports Found OK by outside forces. Reports that were Found OK by central office forces before dispatching are included.
- 0 REFERRED-OUT**  
All trouble reports referred to other forces or agencies for further handling. This does not apply to trouble reports on TWX and WATS Classes of Service when the trouble locates in nearest plant (Station Apparatus, Access Times, and Serving Central Office).

## CAUSE CODES

- 1 MAN MADE-TELEPHONE EMPLOYEE**  
Trouble was caused by a Telephone Company employee or overlooked by an employee on a previous report.
- 2 MAN MADE-OTHER**  
Trouble was caused by other than Telephone Company employees—intentionally or unintentionally. Includes troubles caused by Western Electric employees.
- 3 PLANT OR EQUIPMENT**  
Trouble was caused by overload, failure or breakdown of plant or equipment—dependent of any direct human action.
- 4 WEATHER**  
Trouble was caused by weather conditions. Includes troubles caused by a tree being blown into the route of cables or wires.
- 5 OTHER**  
Covers cases not included in codes 1 thru 4.
- 6 UNKNOWN**  
Covers cases where it is impossible to determine the cause of a trouble or trouble report.
